Are the Antilipidemic Drugs Prescribed to Reduce the Chance to Have Myocardial Infarction Increasing the Possibility to Have Myocardial Infarction Nowadays?

Huang Wei Ling

Infectious Diseases, General Practice, Nutrition, Acupuncture and Pain Management Specialist. Medical Acupuncture and Pain Management Clinic, Franca, São Paulo, Brazil

ABSTRACT

Antilipidemic drugs are used to reduce cholesterol with the main reason, to reduce the chance to have myocardial infarction. In this article, I will demonstrate that these drugs used by the patients can increase the chance to have myocardial infarction even without arterial obstruction. This new mechanism of development myocardial infarction is not studied by normal medical faculties because it is related to alterations in the energy level, studied by Traditional Chinese Medicine, which exists for more than 5000 years. In this study, I will show two cases reports, the first was a 64 years-old, female, which cholesterol levels was 256 mg/dl. It was prescribed atorvastatin but the patient did not use the medication because she asked for another doctor which studies traditional Chinese medicine, and this doctor orientated her to do not use the medication because of this patient was presenting no energy into the five internal massive organs such as Liver, Heart, Spleen, Lungs and Kidney, which corresponds to alteration characterizing this New Global Immunodeficiency. The second case report was a 75 years-old male patient with no complaints. He had cholesterol of 129 mg/dl and his doctor prescribed simvastatin but he did not use this medication because he asked another doctor with traditional Chinese medicine's reasoning, which asked him to do not use this kind of medication to prevent myocardial infarction. These organs are important for many different functions inside the body and one of them are to produce the energy to allow the normal flow of Blood inside the blood vessels through the normal production of *Yin*, *Yang* (by the energy of the Kidney), *Qi* (by the energy of Lungs and Liver) and Blood (by the energy of the Spleen). All these flow of energy inside the human's body is coordinated by the energy of the Heart. According to Arndt-Sculz Law, created in 1888 by two German's researchers, they say that any kind of high concentrated medications can reduce even more our internal energy and can lead to death of this patient.

Conclusion: The conclusion of study is that the use of medication to reduce cholesterol nowadays can induce myocardial infarction in this new type of population that we are treating nowadays, considered immunodeficient, and can lead to death of this patient, even without evidence of myocardial artery obstruction.

Introduction

The use of antilipidemic drugs is usually prescribed to reduce the cholesterol rate to reduce the chance to have cholesterol plaques in the coronary artery, with the intention to reduce the chance to have myocardial infarction [1].

Many studies in the literature are showing that the use of some medications can increase the chance to have myocardial infarction [2-4].

The human being is facing a new phase of life where the energy of the internal five massive organs of the five elements theory studied by Traditional Chinese Medicine (which exists for more than 5 thousand years) are all without energy, according to the study written by Huang (2021) titled *Energy Alterations and Chakras' Energy Deficiencies and Propensity to SARS-CoV-2 Infection* [5].

In this study, she analyzed the energy of the five internal massive organs of the Five Elements theory of Traditional Chinese Medicine of 1000 patients in her clinic in Brazil, and the results of this study was that 90% of her patients were in the lowest level of energy, rated one out of eight, before the COVID-19 pandemic [5].

During the COVID_19 pandemic, there was some patients that developed myocardial infarction after the treatment for SARS COV 2 infection, showed in the article written by Huang (2022) titled *Myocardial Infarction without Arterial Obstruction in Patient Post COVID-19 Treatment* [6].

The purpose of this study is to demonstrate that medications prescribed to reduce cholesterol to reduce the chance to have atheroma plaque reducing the chance to have myocardial infarction can reduce even more the energy of these five internal massive organs and can cause myocardial infarction even without arterial obstruction [5-6].

Methods

I will show two cases reports of patient that was indicated the use of anti-lipemic drugs to reduce cholesterol to prevent the evolution to myocardial infarction.

The first was a 64 years-old, female that went to a normal consultation with her cardiologist. She was not feeling anything in her body and her laboratory exams showed that her cholesterol level was 256 mg/dl. It was prescribed atorvastatin but the patient did not use the medication prescribed because she asked for another medical doctor which studies traditional Chinese medicine, and this doctor orientated her to do not use the medication because she was presenting no energy into the five internal massive organs such as Liver, Heart, Spleen, Lungs and Kidney, measured months ago using radiesthesia procedure.

The second case report of was 74 male patient that went to a routine consultation with his doctor. He showed his laboratory exams (2025) which showed normal cholesterol levels but even being normal, the doctor prescribed simvastatin, which was not used by this patient because he asked for her Chinese doctor, which said that, it is better to do not use this medication because he had no energy in his five internal massive organs (Liver, Heart, Spleen, Lungs and Kidney) and because of this deficiency, it was orientate him to do not use this anti-lipemic drug, to do not cause more energy deficiency situation, that could induce myocardial infarction.

Discussion

According to Hippocrates (460BC- 377AC), the father of medicine, he said in one of his quotes that “it is more important to treat the patient and not the disease the patient have” [7].

In another quote from Hippocrates (460BC- 377AC), he said that “it is more important to consider other ancient medical traditions prior to the knowledge we have nowadays [7]”. In another article written by Huang (2024) titled *Can the Medications We Are Prescribing Cause Myocardial Infarction?* she showed one case report of a 75 years old male patient which has been treating for Parkinson disease, low back pain and depression and was using three types of medication to treat these medical conditions. His Chinese medical doctor was treating him using acupuncture and Chinese dietary counseling, and advised him to reduce the medication that he had been using for years to control his disease as he was in the lowest level of energy in the five internal massive organs of the five elements theory of Traditional Chinese Medicine, demonstrated in the article [8].

He did not reduce the medications prescribed and suffered from myocardial infarction two weeks after this consultation and he died in his house, after suffering from acute myocardial infarction at lunch time in October 2023 [8].

The problem that we are facing nowadays are all in the energy level, invisible to the naked eyes and not studied by Western medical faculties because they only consider "scientific" only what they could see by the naked eyes and what they can see by laboratory or radiological alterations [9].

This happened after the implementation of Flexner report in 1910, where all medical faculties in America and Canada changed their medical curriculum and begin to consider “scientific” only the drugs produced by the pharmaceutical industry [9].

So, the others treatments using homeopathy, phytotherapy, etc. were banned by the medical community and only 20% of all homeopathy schools in America still opened at that time to teach the doctors, but the majority closed their doors [9].

According to the article written by Huang (2023) titled the *New Global Immunodeficiency* we are facing another type of immunodeficiency not caused by the HIV infection or the use of corticosteroids or chemotherapy medications but by the modernization of telecommunication, after the use of cell phones and computers, proofed by O-ring test, showed in the article written by Huang (2021) titled *The Influence of Cell Phones and Computers on Our Immune System* [10-11].

These alterations are all in the energy level, leading to alterations in the production of *Yin, Yang, Qi* and Blood, that are considered the cornerstone of treatment of the majority of diseases, according to traditional Chinese medicine studies [12].

In Chinese medicine, they understand that many diseases can come from the same energy alteration and many energy alterations can lead to the same disease formation [5, 12].

In this article, I am showing that even drugs recommended in the treatment for many diseases in the past can induce severe side effects nowadays but all in the energy level, as shown in the article written by Huang (2021) titled *Are The Medications That We Are Prescribing To Our Patients Harming Them?* [13].

In another article written by Huang (2021) titled *Why is Homeopathy the Medication of Choice in the Treatment of All Kinds of Diseases Nowadays?*, according to her study analyzing the energy of the five internal massive organs of the five elements theory of traditional Chinese medicine, the majority of the population globally are suffering from this energy deficiency situation since 2014-2025, as shown in the article written by Huang (2023) titled *New Global Immunodeficiency* and in another two articles also written by herself (2023) titled *Clinical Characteristics of Children in This New Global Immunodeficiency*, and the second article titled *Clinical Characteristics of Adults Patients Considered Immunosuppressed in this New Global Immunodeficiency* [10,14-16].

In the past, Western and Traditional Chinese Medicine were considered different kinds of medicine, the first exerting influences in the West and the second in the East [12].

But in my clinical medical practice, where I have the chance to study both kinds of medicine, the Western medicine's point of view studied at Londrina State University (1986-1992), and began to study acupuncture and traditional Chinese medicine in 1997, until today, what I found in both medicines were that they are all saying the same thing with other words. The first medicine (Western modern medicine) is studying the part of materialized energy, after years of energy alterations, and the second medicine (traditional Chinese medicine) is studying the part of energy of the human body, before materialized in the part of the human body, that you cannot see by the naked eyes. Huang (2020) showed through the tree like figure (Figure 1) in all her articles to show that both kinds of medicine are saying the same diseases in different point of views. Western medicine is studying only the diseases, in the “leaf” level, as showed in many articles written by her, as you can see in the article written by herself (2020) titled *The Importance of Correcting Energy Imbalances in the Prevention and Treatment of Myocardial Infarction* [17-18].

Figure 1: Treelike Figure Showing the Different Viewpoints of Western and Traditional Chinese Medicine

In this tree, you can see that this tree is divided into two parts, the part above the earth and the part under the earth [19].

The part above the earth is visible to the naked eyes and is representing what Western medicine is divided (each branch corresponds to one medical specialty) and each "leaf" that comes out from each branch represents the diseases treated by each medical specialty. So, in Western medicine, they usually treat the "leaf" of each medical specialty [19].

For example, I usually explain this differences through the history of one of my patients that I attended in 2006 and I will tell you his history to you understand what I want to say in this article [20].

He had been suffering from pain in his legs and was using anti-inflammatory medications for the last 6 months with no improvement of his medical condition only using this kind of treatment. He went to my clinic and told me that he wants to treat his leg pain using another type of treatment [20].

Instead of treat his "leaf" level, I treat his "root" level of this tree, that corresponds to the energy imbalances presented by the patient that was causing his symptoms in the "leaf" level of the tree, showed in the article written by Huang (2019) titled *The Importance of Correcting Energy Imbalances and Chakras Energy Deficiencies in the Treatment of Patients with Glaucoma* [20].

After ten acupuncture sessions and changing his dietary habits using Chinese dietary counseling, it was possible to cure his leg pain condition but he said that he improved from another condition that I was not aware of, that it was presenting high intraocular pressure for the last 40 years with no improvement only using eye drops [20].

For the first time of his life, his intra-ocular pressure reduced from 40 mmHg to 17 mmHg, after this energy-based treatment focusing in the "root" level and not in the leaf level of the tree [20].

This case was presented in the AAMA (American Association of Medical Acupuncture), in 2007 and since then I started to present in many medical conferences worldwide to show that it is important to treat the cause of the formation of disease (presented in the "root" level of the tree) and not just treating the symptoms, caused by this energy imbalances presented in the "root" of this tree [20].

In 2015, it was also presented again in the Acupuncture Research Conference that was held in Boston, in Harvard Medical School.

In this conference, it was presented the theory saying that "if we treat the energy imbalances presented by the patient, all emotional or physical symptoms should improve at the same time", as showed in the patient explained above of leg pain and glaucoma [20].

In the "root" of this tree, there are two theories of traditional Chinese medicine, that is the *Yin and Yang* theory and the Five Elements theory, showed in the article written by Huang (2024) titled *Can The Medications We Are Prescribing Cause Myocardial Infarction?* The first theory is the *Yin and Yang* theory, represented by this symbol shown in Figure 2 [8].

Figure 2: Yin and Yang Symbol

They need to be in harmony and the disequilibrium between them, can cause the formation of some diseases in the "leaf" level, showed through the Figure 3. When there is less *Yin* and more *Yang* energy, the patient can have symptoms of menopause such as hot flashes and heat sensation or formation of diabetes or auto-immune diseases, showed in the article written by Huang (2020) titled *Chakra's Energy Deficiency as One of the Cause of Menopause Symptoms in Women* [21].

Figure 3: The Equilibrium of Yin and Yang and the Disequilibrium Between them Shown in this Same Figure

The second theory presented in the "root" level of the tree is the Five elements theory (Figure 4), where each element corresponds to one internal massive organ showed in the article written by Huang (2022) titled *Myocardial Infarction without Arterial Obstruction in Patient Post COVID-19 Treatment* [17].

Figure 4: Five Elements Theory

Each element corresponds to one internal massive organ as you can see in Figure 5 [8].

Figure 5: Five Elements Theory and One Internal Five Massive Organs

In this theory, they are showing that one organ is responsible for the production of one internal energy and one external sensorial organ. For example, the Kidney is responsible for the production of *Yin* and *Yang* energy, the Liver and Lungs and responsible for the production of *Qi* and the Spleen is responsible for the production of Blood and all these flows of energy is controlled by the energy of the Heart, showed in Figure 6 [19].

Figure 6: Five Elements and the Energy that Each Organ is Producing

In the Figure 7, you can see that the Blood to circulate inside the blood vessels needs to have *Yin*, *Yang*, *Qi* and Blood.

Figure 7: Blood, *Yin*, *Yang*, *Qi* and Blood

Yin and *Yang* are two energies produced by the Kidney [8].
Qi is produced by the Liver and Lungs [8].

As I told you in the beginning of this article that we are facing another type of immunodeficiency caused by the modernization of telecommunication, shown in the article written by Huang (2023) titled *New Global Immunodeficiency* and the results of the measurements of the energy of the five internal massive organs of the majority of the population nowadays can be shown in Figure 8 [10].

Figure 8: Energy Deficiency Inside the Five Internal Massive Organs of the Five Elements Theory [8]

The use of any kind of highly concentrated medication in this new type of population that we are treating nowadays, can cause a reduction even more of this internal energy, and can lead to death of this patient, demonstrated in Arndt-Schultz Law, created in 1888 by two German researchers, shown in Figure 9 [22].

Figure 9: Arndt-Schultz Law

For this reason, the use of medication to prevent high cholesterol or treat high cholesterol condition should be only highly diluted medications (Figure 9) to increase the vital energy of this patient and reduce the chance to have myocardial infarction, as you can see in Figure 7, because if we reduce even more the energy of these organs, the Blood can stagnate in any part of the body and if they stagnate in the coronary artery, it can cause myocardial infarction, even without arterial obstruction [17-18,23].

Western medical doctors are not doing the diagnosis of this kind of deficiency and still using highly concentrated medications increasing the chance to have kind of disease as complications such as diabetes, hypertension, myocardial infarction, cancer, etc. There is the necessity to integrate the knowledge of Western with traditional Chinese medicine's reasoning, to understand in the deepest level, what it is happening in the "leaf" level of the tree but also, in the "root" level of the tree, invisible to the naked eyes, showed in Figure 1 and Figure 10 [17-19, 24-25].

Figure 10: Metaphor of *Yin* and *Yang* of Western and Traditional Chinese Medicine

Conclusion

The conclusion of this study is to demonstrate that medication to reduce cholesterol to reduce the chance to have myocardial infarction can increase the chance to have myocardial infarction even without arterial obstruction, because this myocardial infarction is not just caused by arterial obstruction, but caused by energy deficiency situation, leading to stagnation of Blood, causing in this case Blood stagnation in any part of the body, or myocardial infarction if this Blood stagnation occurs in the myocardial artery, and can lead to sudden death.
