Can The Medications We Are Prescribing Cause Myocardial Infarction?

Huang Wei Ling

Infectious Diseases, General Practice, Nutrition, Acupuncture and Pain Management Specialist. Medical Acupuncture and Pain Management Clinic, Franca, São Paulo, Brazil

ABSTRACT

Introduction: Myocardial infarction is one of the leading causes of death in United States and it is characterized when there is a decrease or complete cessation of blood supply to myocardium. In this article, the author will show that the use of any kind of highly concentrated medication can reduce or cause Blood stagnation in any part of the body and can cause myocardial infarction when the blood stagnates in myocardial tissue leading to myocardial infarction in this new type of population that we are attending nowadays. This is caused by alteration in the energy part of the five internal massive organs energy (Liver, Heart, Spleen, Lungs and Kidney) of the five elements theory of traditional Chinese medicine, caused by the modernization of telecommunication leading to a state of immunodeficiency. The use of any kind of highly concentrated medication in the treatment of variety of disease can evolve to blood stagnation and cause thrombosis in any part of the body and can lead to myocardial infarction or even death.

Introduction

Myocardial infarction occurs when there is a decrease or a complete cessation of blood flow of blood in the myocardial tissue [1]. Since the implementation of Flexner report in 1910, it was instituted that the medication of choice to be used in the treatment would be highly concentrated medications produced by pharmaceutical industry [2]. It also was instituted that they would only consider “scientific” what they could proof by laboratory or by radiological level [2]. The part of energy that composed the human body was put aside [3].

The purpose of this article is to show that the use of any kind of highly concentrated medications in this new type of population that we are attending nowadays (considered immune compromised due to this energy deficiency in the five internal massive organs of the five elements theory of traditional Chinese medicine) and the use of any kind of highly concentrated medications such as anti-pyretic, anti-inflammatory medications, anti-hypoglycemic medication, anti-depressant, anxiolytic, chemotherapy, etc. can reduce even more the internal energy and cause complications or even death of this patient due to this energy reduction leading to more propensity to have blood stagnation in any part of the body, and if stagnates in the heart, can cause myocardial infarction.

Methods

Through one case report of male patient of J.,75 years old. He had been treating for Parkinson for the last two years using some highly concentrated medications such as levodopa – benserazide

(Prolopa). The neurologist advised him to use three tablets per day but he was not improving his health condition. He went to my clinic to see the possibility to reduce his tremors using Chinese medicine’s tools. I measured the energy of his five internal massive organs using the radiesthesia procedure.

Results

The results were that all his internal organs (Liver, Heart, Spleen, Lungs and Kidney) were in the lowest level of energy, rated one out of eight. The treatment of this condition rebalancing and replenishing these energies using highly diluted medications according to the theory of *Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine* and crystal-based medications improved his health condition and his tremors reduced a lot.

I advised him to reduce the ingestion of medications recommended by his doctor because of the alterations that he was presenting in the energy of his internal five massive organs, could cause some complications if he continues to use these medications. He reduced the intake to only one pill per day instead of using three pills per day, as recommended by his neurologist.

This patient stopped to go to the acupuncture session for about six months and one day, in 2023, he returned to my clinic saying that he cannot walk and was very weak in energy. He took a lot of medications (anti-hypertensive medications, amantadine, levodopa – benserazide, rasagiline and others) that he was using and I asked him to reduce them to prevent complications (due to his energy deficiency condition).

He did not stop the medications prescribed by his doctor and went to my clinic for two weeks to do acupuncture sessions to treat his Parkinson disease. In the week end two weeks after he returned to my clinic, I received one message from a mutual friend of mine and the patient saying that this patient suffered myocardial infarction on 11-18-2023 at the lunch time in his house and passed away. He was admitted in the hospital but was not alive anymore when he reached to hospital in the emergency room. The reason why this happened I will explain in the discussion section.

Discussion

This article will be written by the influences of Hippocrates (c. 460 BCE- c. 375 BCE), the father of medicine, which said in one of his oaths that “foolish the doctor who despises the knowledge acquired by the ancients” [4]. For this reason, it was used the reasoning used by traditional Chinese medicine which exists for more than 5 thousand years, to explain this subject [5]. Modern medicine is following Flexner report (1910) which the main object was to change the medical prescription to highly concentrated medications produced by the pharmaceutical industry and all medications such as phytotherapy and homeopathy were considered unscientific at that time [2].

Flexner changed the medical curriculum of all America and Canada medical schools and begin to consider “scientific” only what they could proof by laboratory or radiological level [2]. According to Albert Einstein ((1879-1955) the most famous physics in this world, he said that “all the things in this Universe is composed of energy” and the human being is also composed of energy [6]. This energy part is not studied by the modern medical community but it was studied by traditional Chinese medicine and the different viewpoints between them is demonstrated in the tree metaphor, shown in Figure 1 [7-9].

Figure 1: Tree Metaphor Showing the Different Viewpoints Between Western and Traditional Chinese Medicine

In this Figure 1, you can see that this tree is divided into two parts, the part above the earth and the part under the earth [10].

The part above the earth is considered the part observed by Western medicine’s doctors characterized by many branches and each branch means one medical specialty. For example, there is branch of orthopedic, ophthalmology, pediatrics, neurology, gynecology, urology, nephrology, etc. and coming out of each branch, you can see many leaves and each leaf means one symptom or disease treated by each medical specialty [11].

The part under the earth, there are two theories studied by traditional Chinese medicine and this part is usually invisible to the naked eyes and is not taken into account in Western medicine’s reasoning [9].

These two theories are *Yin* and *Yang* and Five Elements theory, shown in Figure 2 and 3.

Figure 2: Yin and Yang Symbol

Figure 3: Five Elements Theory

Yin and *Yang* are two energies that exists in this universe and they are opposite and complementary such as day and night, sun and moon, man and women, black and white, hot and cold, etc [12].

There is the necessity to have an equilibrium between these two forces as you can see in the first collum of Figure 4 and the disequilibrium between them can lead to diverse diseases as you can see in this Figure 4 [13].

Figure 4: Energy Imbalances Between *Yin* and *Yang* Energy

When *Yin* is less than *Yang* energy, the patient can feel hot flushed with hot hands and feet such as the symptoms presented in women in menopause [13]. When *Yang* is less than *Yin*, the patient can feel cold hands and cold feet and can have abnormal liquid retention and tendency to have uterine and bladder prolapse [14,15].

The second theory of the Five Elements corresponds to Wood, Fire, Earth Metal and Water and they represent each internal massive organ (Liver, Heart, Spleen, Lungs and Kidney) respectively [9].

Each organ is responsible for one external sensorial organ and for the production of one specific energy for our survival. For example, Blood is produced by the Spleen. *Yin* and *Yang* energy are produced by the Kidney. *Qi* is distributed by the Liver and Lungs and they are in adequate quantity if the amount of blood and *Yin* and *Yang* energy is in adequate level also. Their interrelationship is shown in Figure 5 [9].

Figure 5: The Interrelationship Between *Yin*, *Yang*, *Qi* and Blood

To understand all these energy production by each organ is very important to understand why the use of any kind of medication can induce blood stagnation leading to thrombosis, myocardial infarction or even death of this patient because according to Arndt-Schultz Law, created in 1888 by two German researchers. In this law, they said that the use of any kind of highly concentrated medication can reduce the internal energy or can lead to death of this patient (Figure 6) and the use of highly diluted medication can increase the internal energy and this is the effect that we want to have in this new type of population that we have nowadays, considered immunodeficient shown in the article titled *New Global Immunodeficiency* [16,17].

Figure 6: Arndt-Schultz Law

In research made in my clinic in Brazil analyzing a 1000 patients' energy of the five internal massive organs (Liver, Heart, Spleen, Lungs and Kidney), from 2015 to 2020, I concluded that 90% of them were in the lowest level of energy, rated one out of eight, shown in Table 1 [18].

Table 1: Results of Research in Brazil Analyzing A 1000 Patients' Energy of The Five Internal Massive Organs

Ages Chakras	2-19	20-59	60-79
7	8	8	8
6	1	1	1
5	1	1	1
4	1	1	1
3	1	1	1
2	1	1	1
1	1	1	1
Total of Patients	26	170	86
Main Western diagnoses	Anxiety	Anxiety	Anxiety
	Depression	Headache	Knee pain
Main Oriental Diagnoses	<i>Yin/Yang</i>	<i>Yin</i>	<i>Yin</i>
	<i>Yin/Blood</i>	<i>Yin/Yang</i>	<i>Yin/Internal Heat</i>
			<i>Yin/Yang/Internal Heat</i>

In this Table 1, I am showing that independent on the type of diagnosis and independent on the age group, all patients have the same energy alterations in the five internal massive organs nowadays, meaning that all of them are considered immune compromised and not immune competent [17,18].

So, the Blood to circulate inside the blood vessels needs to have *Yin*, *Yang*, *Qi* and Blood in adequate amount and the reduction of one of these energies or the reduction of all these four energies that occurred when we use highly concentrated medications can cause Blood stagnation, caused by reduction of energy in the Liver, Heart, Spleen, Lungs and Kidney, that are responsible for the production of *Qi*, Blood, *Yin* and *Yang*, shown in Figure 5 [9-19].

The meaning of this energy reduction in these five internal massive organs described above is that, each organ has one energy production function to allow the blood to flow inside the blood vessels. They are *Yin* and *Yang* (produced by the Kidney), Blood (produced by the Spleen), *Qi* is distributed by the Liver and Lungs and the energy of the Heart is responsible for the distribution of all these energies inside the blood vessels [9-19].

The treatment of the whole population in this world using highly diluted medication according to the theory of *Constitutional Homeopathy of the Five Elements Based on traditional Chinese Medicine* (Figure 7) is of paramount importance to treat the cause of immunodeficiency (that are the energy deficiency inside the five internal massive organs) that are leading to propensity to have blood stagnation after using highly concentrated medications as shown in this case reported in this article [17-20].

Figure 7: Homeopathy Medications Used to Replenish the Energy of These Five Internal Massive Organs

The medications receipt by neurologist was treating the “leaf” level of the tree but were causing harming even more to the internal energy of the five massive organs presented in the root of the tree, that are invisible to the naked eye [21].

In another article written by Huang (2023) titled *To Know Which Type of Medication We Need to Prescribe, We Need to Know the Type of Population that We Have Nowadays*, the use of highly concentrated medication or highly diluted medications will depend on the type of energy that the population that we are attending nowadays are presenting [22].

In this case, the majority of population are considered low in energy inside these five internal massive organs (Figure 8), and the use of highly concentrated medications can reduce the internal energy and cause formation of internal Fire leading to inflammatory process or leading to stagnation of Blood inside the blood vessels and can lead to myocardial infarction when using any kind of highly concentrated medication [21].

Figure 8: Energy Deficiency Inside the Five Internal Massive Organs Presented by The Whole Population Globally

The use of highly diluted medications to replenish the energy of these organs can reduce the chance to have this complication but in the case of the patient presented in this article, he was also using the medications to replenish the energy of these organs but the amount of highly concentrated medications was higher and induced more energy deficiency instead of increasing the internal energy, causing stagnation of blood inside the blood vessels in myocardial tissue, leading to sudden death [20-23].

The majority of cases of myocardial infarction is caused by underlying coronary heart disease and it is considered the most important cause of death in United States [1]. Even patients with myocardial infarction with arterial obstruction also have in the back ground, energy deficiency inside the five internal massive organs of the five elements theory of traditional Chinese medicine

and there is the necessity to understand all these energy alterations involved in the treatment of this new type of population that we are treating nowadays, because the majority of treatments only aim to revascularize the obstruction of the artery without treating the energy deficiency condition that the patient have in the background [24].

Even patients with myocardial infarction without arterial obstruction have in the background, energy deficiency inside the five internal massive organs as shown in the article written by Huang (2021) titled *Chakras’ Energies Deficiencies as the Main Cause of Myocardial Infarction without Arterial Obstruction*. In this article, the author is showing a case of patient that presented three episodes of myocardial infarction, one every two months and was submitted to angiography study and reveal that she was not presenting any obstruction. Only after studying the alterations presented in her energy level and performed the treatment using highly diluted medications according to the theory written by myself (2020) titled *Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine*, it was possible to stop the myocardial infarction events and she did not present any episode of myocardial infarction since then [10,20].

In another article written by Huang (2022) titled *Myocardial Infarction without Arterial Obstruction in Patient Post COVID-19 Treatment*, the author reported a patient that developed myocardial infarction two days after discharging from the hospital after receiving the COVID -19 treatment. In this treatment, they used only highly concentrated medications such as antibiotics, anti-inflammatory medications, etc. that developed blood stagnation caused by energy deficiency inside the five internal massive organs of the five elements theory of traditional Chinese medicine [11].

The risks of surgical patients nowadays to be submitted to any procedure that requires anesthesia needs to have much attention because every patient that are submitted to surgery have in the background, energy deficiency inside the five internal massive organs and the use of anesthesia induction can reduce even more this internal energy and can cause complications such as myocardial infarction or sudden death [25].

In this article, it was used the combination of knowledge of Western modern medicine with the reasoning used by traditional Chinese medicine, to understand what could be happening in the energy level, invisible to the naked eyes. The wholistic view of our patients nowadays is very important to understand in the deepest level what could be happening in these patients that are using highly concentrated medications in the treatment of the majority of diseases. The combination of knowledge of Western and traditional Chinese medicine, one looking at the materialized part of energy and the other looking at the invisible part of the energy, as you can see in the *Yin* and *Yang* metaphor of Western and Traditional Chinese medicine, shown in Figure 9, is very important to understand wholistically the human being [10].

Figure 9: Metaphor of *Yin* and *Yang* of Western and Traditional Chinese Medicine

Not only highly concentrated medications can cause this energy reduction but also, the use of metallic implants inside the body can reduce the internal energy and can cause complications such as myocardial infarction. In an appointment with my dentist, he said that one of his patients died 4 months of myocardial infarction after did titanium implants in his teeth. He did not pay all amount of his treatment to his dentist and died after 4 months. To the dentist, the myocardial infarction did not have correlation to the titanium implants but if you understand the mechanism of immunodeficiency caused by these implants, you can understand that they can reduce the energy of the internal five massive organs and cause complications, in this case, caused blood stagnation and death of the patient [26].

The use of highly concentrated vaccines can also cause this kind of complications as reported in the article written by Dana et al. (2022) titled *Myocardial infarction following COVID-19 vaccine administration; a systematic review*, where the author is describing after doing a revision of some articles that 20 patients developed myocardial infarction after receiving the COVID-19 vaccine, and the time for this development were about two days after the administration of this vaccine. The Astra Zeneca vaccine was responsible for more than 50% of those events [27].

For this reason, Huang (2022) wrote an article titled *Why is Highly Diluted Oral "Vaccine" For COVID-19 the Safest Option in this Pandemic?* where the author is saying that the use of highly diluted vaccine is more safe compared to highly concentrated injected vaccine because the type of population that we are attending nowadays is different from the population that we have in the past, because in the past, the population have energy inside the five internal massive organs, very different from the population that we have nowadays, considered immune compromised due to this energy deficiency inside the five internal massive organs, responsible for the production of internal energy to all the normal flow of the Blood inside the blood vessels [28].

To finalize this article, I would like to say that the use of traditional Chinese medicine is allowed in Brazil through acupuncture and it is considered medical specialty by the Federal Medical Council in Brazil since 1995. Also, homeopathy is considered medical specialty by the Federal Medical Council in Brazil since 1980 and it is the medications of choice to be used in this new type of population that we are having nowadays, considered immunodeficient [29].

In this article, it was shown another form of development of myocardial infarction caused by energy deficiency inside the five internal massive organs that it is affecting the whole population in this world and the use of any kind of highly concentrated medications such as anti-pyretic, anti-inflammatory medications, anti-depressant, anxiolytic, anti-hyperglycemic, anti-convulsant, chemotherapy, anti-hypertensive, antibiotics, sleep inducers, corticosteroids, anesthetic, etc, all of them can cause complications and cause blood stagnation and lead in this case to myocardial infarction and sudden death [21].

The conclusion of this article is to demonstrate that the use of medications current used by medical community to treat diverse disease and also, used in prevention of some disease such as vaccines can reduce even more the internal energy, that it is already very low and can cause stagnation of Blood inside the blood vessels and can lead to complications such as myocardial infarction. The use of highly diluted medications is recommended

for the use in the prevention and treatment of the majority of diseases nowadays, due to this alteration of lack of energy inside the five internal massive organs (Liver, Heart, Spleen, Lungs and Kidney) found in the energy level, responsible for the production of internal energy to allow the normal flow of blood inside the blood vessels.
