## New Perfection of Original Xx-Xy (Female-Male) Gender Theory and Beyond: Assuring Mother and Father Care Umbrella for Japanese Happy Life and Survival of Social Legacies Forever

Yadav RC

Bio-System Engineer, Formerly Head of ICAR- IISWCRTI Research Centre, Agra, Uttar Pradesh, India

**ABSTRACT**

Japanese are highly regarded for their lifestyles, wisdoms and aged survival gentry population among the developed countries of the world. There are lot of worries for the developing aging and low fertility among the populations. No improving situation to cope up with such natural phenomena seems to be coming up. Following new perfection of the original xx-xy (female-male) gender theory and beyond further studies were conducted on how to enable reducing aberrations causing misbalance in family genders. Such aberrations in the family genders were also found associated with early death of either one of the parents or causing non curable health ailments, impairing the life courses in the families. Objective of the present study was that in addition to making balanced families also create mother and father care umbrella for the family to maintain happy life courses of Japanese. The study fixed bio factors, produced cause and effects and developed prismatic gender balanced families, needed for reaching unforeseen and unimaginable acme. Thus, the study ushered a new prestige to the Japanese life known for its novelty to new niche in exemplary long life and harnessing plenty benefits by making survival of social legacies forever. Upcoming of the results of this study will help overcoming disabled children becoming parents to produce offspring free of genetic disabilities. This study opens a new dimension of high geographical areas of Japan under hill and forests, considered as a limiting setback for the country in to a plus point in enhancing gender balanced families and revamping population sustainability.

**Introduction**

Taking starting point of human generations, it is obvious that it grew and developed in its natural course of birth, childhood, adolescence, maturity, reproduction, aging and finally coming to deaths. This course prevailed before century and after the AD. There occurred different wisdom based on ancient and developing cultures. There was no any scientific theory to come to become basis for explanation. The generation growth got religious support in the world countries, each claiming its originality as per developing wisdoms world over. The gender was considered as Gods grace adorned by different religions. This aspect might become topic of debate, which is not the aspect, being dealt in the present study on misbalanced in genders in families. As communities grew, wisdom followed customs and cultures. Many societies atrocities also grew in the society as depicted by study and, depicting situations of 19th century [1,2]. Many religions also came to shape societies, which need another study. The present study was on the development of misbalance in family genders. In the early years of the 20th Century the gene theory of xx-xy (female - male) gender was discovered by Williams and Stevenson in 1905 (Singh 2016, which became scientific base for the understanding the basis of development of genders [3]. But, unfortunately, there came lot of aberrations, making loss of belief

on the theory and prompting people to follow their own thoughts for acquiring Gods grace. This author took an exceptional lead over elapse of one and a quarter Century in 2021, to find cause and effects of such aberrations in the gender births and fix cause and effects, which was highly applauded and accepted in medical doctors wisdomshonoured journal [4]. Further deep case by case studies lead to may coming up of many aspects related to human biology. These studies could come up a new perfection in the original xx-xy (female-male) gender theory and moved beyond it [5-9]. The new perfection in theory and beyond were applied to cover many aspects and issues of gynecological concerns. It came to fixing biological factor in bringing misbalance in gender theory, associated genetic ailments serving as visible indicators and its implication of mother and father health and wellness as well as developing possibility of sustainable population. With time the aspects of applications of new perfection of the xx-xy (female-male) gender theory getting expanded. It became a curiosity to find adverse impact of pollution on the gynecological aspects [10].

It came to seek possibility of application of the new perfection in the original theory on development of gentry which are of exemplary in their characters, dedications and longevity of life and making the population sustainable. While the scientific theory was perfected information were extracted from available literatures, which can be accepted true to happen, without indulging on issue of debate.

Naturalized Japanese citizens and native-born Japanese nationals with multi-ethnic background are all considered to be Japanese in the population census of Japan. Japanese people enjoy a high standard of living, and nearly 90% of the population consider themselves part of the middle class. However, many studies on happiness and satisfaction with life tend to find that Japanese people average relatively low levels of life satisfaction and happiness when compared with most of the highly developed world; the levels have remained consistent if not declining slightly over the last half century. Japanese have been surveyed to be relatively lacking in financial satisfaction. The societal view generally disapproves of out-of-wedlock births and premarital pregnancies. Social isolation is a problem for a segment of Japanese society, with almost 500,000 young people belonging to this group, they are also known as hikikomori. [

The Japanese management working culture in Japan has led some to work-related deaths due to heart attack or stroke, this has led to the term *karoshi* (lit. “overwork death”). The government has received 200 claims of *karoshi* related work injuries each year, with some leading to suicide. Many Japanese lead a sexless marriage with reasons of “tired” and “bored. This aspect affects lovelife implicating growth or decline of country population.

The population of Japan has been decreasing since 2011. Only 8 prefectures had increased its population compared to 2010, due to internal migration to large cities.. Urban population distribution situation reported by the Wikipedia of Japan that the Japan’s population is aging faster than that of any other nation. The population of those 65 years or older roughly doubled in 24 years, from 7.1% of the population in 1970 to 14.1% in 1994. The same increase took 61 years in Italy, 85 years in Sweden, and 115 years in France. In 2014, 26% of Japan’s population was estimated to be 65 years or older and the Health and Welfare Ministry has estimated that over-65s will account for 40% of the population by 2060. The demographic shift in Japan’s age profile has triggered concerns about the nation’s economic future and the viability of its welfare state [11].

Japanese Prime Minister Fumio Kishida pledged to take urgent steps to tackle the country’s declining birth rate, calling it “now or never” for Japan’s aging society, and planed to double the budget for child related policies by June and set up a new government agency in April.

Japan gentry remain highly stressed in office busy life, worry for nationality, isolation in society, late marriage and many social issues. These problems discourage Japanese having pleasure life style creating feeling good and wellness. The universal awareness of gender theory seems lacking, culminating in decrease in birth rates and increasing no of aged gentry over 65 years or more. Goggle search on fruits and nuts in Japan showed a poor scene on fruits and nuts availability. Largely available fruits are citrus, oranges, grapes and cherry, which are least stress relievers and non genomic. There are different categories of fruits which fall in genomic fruits and vegetables. Japanese meal, largely consisting of rice, and nonveg, dominated by liquors, which becomes equally deterrent factors that inhibit development of rise in the birth rates.

Equipped with the knowledge of origin, societies, cultures, customs, and scientific advancement reaching to new perfection in the original xx-xy (female-male) gender theory and beyond, developing prismaticism, it became imperative to conduct study with objective of study on application of such scientific knowledge in case study on Japanese gentries which are unique in many

idealistic aspects of society, dedication and technological advancements. This study creates new light for scientific backing in relation to gynecological and medicinal aspects and reaching at new innovations to bring further improvement in enhancing the legendary reputation to another niche of acme for Japan.

**Figure 1:** High standard of living scenario of Japanese gentry and culture (Source- Wikipedia of Japan)

## Materials and Methods

### Birth and Gynecology Situations

Births of offspring occur individually, in general, get care taken of, with child care and grow with time. However the genetic disorder causes misbalance in family genders. Under the progress of new perfection of original xx-xy male female gender theory and beyond brought plenty improvements in life course. This research is focusing on genetic and survival of social legacies forever.

### Problems Occurring Due to Imbalanced Genders in Families

Plenty misbalance in gender of family lead to a lot of social problems. Somewhere the female to male ratios are very high, which demanded Governmental schemes to create new social infrastructures for welfare of girls.

### New Scientific Innovative Solution

In 19<sup>th</sup> Century and even before the births of genders were on merely on God’s grace. hence people remain content accepting the gender as it emerged. The care and welfare remained centered for male children and girls had to suffer piti situation as listed [1,2]. The aberrations compelled people loose trust and situation of belief rested as purely God’s will, believes prevailed.

### The XX-XY- (Female –Male) system Gender Theory

In 19<sup>th</sup> century the gender birth was taken as God’s blessing. People remain content accepting the gender as it emerged. Their care and welfare remained centered for male children and girls had to suffer piti situation as listed [1],[2]. There had been a lot of aberrations in results of the gender theory Singh, (2016)[3]. The aberrations compelled people lose trust and situation of belief again rested as purely God’s will belief prevailed.

### Aberrations in The Xx-Xy Male Family Gender Theory Reverting the Scientific Temper and Resting on Many Blind Belief

Data on such aberrations will be in terms of case studies which will be presented category wise and analyzed in the result.

### New Perfection of Original Xx-Xy (Female-Male) System Gender Theory

Deep case studies reported first time by Yadav, 2021 on pondering cases proved very informative opening new facts of gynecological

concern. Further, deep studies and, enabled arriving at new perfection of original xx-xy (female and male) gender theory and beyond [2-7]. This new perfection disclosed many new issues which were not in imaginations in the original discovery of the gender theory [3]. Many sociological and cultural implications were covered in studies [3-14]. The new aspects opened by these gender aberrated cases study on health issues of the parents of the misbalanced genders in individual families are taken in the present study.

**Genetic Diseases New Window for Appraisal of The Situation**

The aberrations in the births of genders appeared as set back of gynecological disorder in ladies, if the urine pH is highly acidic. Conversely, when pH is high, particularly in males, it causes baldness, kidney stones and other problems. These genetic diseases will get eliminated by the newly perfected xx-xy-(female-male) gender theory and innovative prismatism of offspirngs [2-4].

Prismatic New Designer Gentry for The Reference Country- Japan In the introduction part of the study sufficient reasons were found to be responsible in reduction of birth rate and increasing aging population more than 65 years of more. There are plenti stress creating working life and sociological lifestyles in multi nationality gentry of Japan. These facts will be further elaborated in result and discussion part of the study.

**New Scientific Backing for Preparing Policy Issues for Sustainable Development of Population**

The new perfection of the scientific original xx-xy (female-male) gender theory provides scientific backing for what has caused the existence of bad scenario vis vis what need to be done to bring as policy issue to improve it in Japan.

**Developing Social Legacies of Exemplary Renowned Personalities**

Social legacy survival is a new innovative sociological factor highly relevant in causing the bad scenario; which can be suitably revamped by national policy issue for Japan. This will be presented in result and discussion part of the study.

**Development and Acquisition of Data on Gender Misbalanced Developing Situation**

News papers reports have published recent gender ratio of females to male children. The situations have been getting different from those in 19th century. The mind sets on the welfares have improved. The researcher had set of data on pondering situations on misbalance of genders in family, which is becoming valuable research asset for issues related to gynecology. This data set is used in convincing gynecologist world over in setting gentry and

population. However, aberrations have created misbalance in genders which mean lot of implications. The Wikipedia of Japan was searched for generating variety of population, gentry, work stress and life styles. Google search was also made for gathering information on fruits, nuts and vegetables in Japan, from list revised in June, 2021. This will be presented in result part of the study.

**Results**

**The Aberrations in The Xx-Xy Gender Theory**

The present study brought innovative advancement in understanding community related social and medical implications. The following section presents balanced, misbalances as a result of no male child in family and misbalance as a result of only male children in family with varying socio-economic backgrounds

**Case Study Having Misbalance In Family with Girl Children and No Male Child**

The case by case deep analysis was reviewed and crucial bio factors identified. Table 1 presents well acquainted cases known to the author. The misbalance leads situations with plentiful care and welfare worries for the family, although to lesser extent than those reported in the 19th century and [3,4]. There were remarkable improvements in the situations of developments in girl children’s education. The education has brought remarkable improvement in the communities, societies, villages, markets towns culminating in countries. However there are also set backs due to development in misbalance in family genders. In this situation the scientific theory of xx-xv female-male gender discovered about one and a quarter became a hope understand the scientific backing of growth of populations. As revealed by listed known cases mere girls in families the hardships of rearing such family is still difficult, and scenario is different from those that existed in the situations before study and study [4].

In five cases depicted in Table 1 one case revealed minor mental weakness disorders. In such cases the ladies’ gynecological problems overtake and such ailments produce gender misbalance. This fact reminds people first seek and take medical advisory of gynecologists before going for pregnancy. The ladies’ problems occur due dominance of acidity indicated by low pH of urine. In such medical advisory consultation pH levels of both members of couple will be guiding factor in fixing problem and prescribing curative treatments. Surprisingly, attitudes for pre consultations have not come up in couples, not merely in uneducated families, but in developed countries as well. This process is entangled by pleasure, where health and feeling good is the prime controller. The situation will be getting clearer in the coming part of the case study.

**Table1: Aberrations in xx-xy (female-male) gender having only daughters**

S.No	Genders		Other attributes			
	Male	Female	Living standard	Offsprings	Amelioration	Sociological situation
1						
2	M5	F8	Normal	4 daughters	Non ameliorated	pondering situaton
3	M6	F9	Normal	3 daughters	Non Ameliorated	pondering situaton
4	M7	F10	Average	3 Daughters	Female had mental disorder	2 <sup>nd</sup> daughter had some disorder
5	M8	F11	Normal	8 Daughters	Non amiliorated	Pondering situation

\*Subscripts M and F are arbitrary. They merely signify different identification in array.

### Aberrations in The Xx-Xy (Female-Male) Theory, Social and Family Health Having Only Male Children

Table 2 presents case study of well acquainted family having only male children [2]. Cases reveal special health situation of parents. The social implications are different from those existed during the 19th century when Jyotiba-Savitribai Phule were involved in overcoming problem then [3,4]. By that time there existed no scientific gender theory. This study will take account of new scientific advancement of gender xx-xv female-male theory [1]. As it was apparent, in births of females (Table 1), there also occurred aberrations in birth of male children (Table 2). In such aberrations it became clear that appearance of health disorder in fathers appear in almost in all cases irrespective of numbers of births. The ailments of health in ladies also exist, but few in numbers, because of natural reason of no easy disclosures. The ailments in males as well as in females occur due to Vaat Rog (corresponding to gaseous invasion in mind). In such cases the pH is high ie > 6.0. Higher pH causes stone formation in kidney and associated UTI organs.

**Table 2: Misbalance in family having only male children**

S.No	One male and one female with natural developments producing only son					
	Male	Female	Living standard	Offspring	Health of parents	Social implication
1	M11	F14	Normal	3 Sons	Father had severe headache	Stone in gall bladder
2	M12	F15	Excessive non veg eating	5 Sons	Male with baldness	Having antisocial attitude.
3	M13	F16	Normal	2 Sons	Male with migraine	Needs ameliorative measures
4	M14	F17	Normal	2 Sons	Female suffered mental disorder	Family could not provide continued mother care.
5	M15	F18	Normal	4 Sons	Male baldness and Female mental disorder	Family could not provide continued mother care.
6	M16	F19	Normal	6Sons	Non aberrated case	No noticeable def ect
7	M17	F20	Normal	2 sons	Male bald head, female died at early age	Family could not provide continued mother care.
8	M18	F21	Normal	2 Sons	Female suffered severe disease	Family could not provide continued mother care.
9	M19	F22	Normal	2 Sons	Male disorder season change	Needs measure to overcome
10	M20	F23	Normal	2 Sons	Male suffered baldness	Confirming baldness
11	M21	F 24	Normal	2 Sons	Male had baldness	Confirming baldness
12	M22	F25	Normal	1 Son	Male had bald head	It becomes signal that the offspring will be son
13	F24	F26	Normal	1 Son	Male had some mental disorder	It becomes signal that the offspring will be Son

\*The subscripts M and F are arbitrary. They merely signify identification in the array

The community and society problems are quite different in misbalanced families having only male children from those one having only females. It is clear that initial mental depression and baldness prove to be confirmed bio factor indicator. The community and society will have large no of mental cases as one becomes over ambitious and always think of becoming rich to support families. A poor offspring of poor father has strong likelihood of becoming unsocial as he has different kind of worries, craze and mental depressions. Lack of education also leads to such unpleasant behavior of families as it grows with time. Therefore, food and drink habit, craze, community, educations and Godly belief come in play to shape the community and society. As indicated the genetic disorders of gender is controlled by the feeling good and wellness known to be caused by cloud like situations forming acidity levels [2]. Many related aspects will follow in this study.

### Case studies on gender balanced family

The cases listed in Table 3, were ameliorated cases having equal nos of genders. Raising children in such gender-balanced families is less strenuous due to social implications as the children grow than those in misbalances families, as established in studies [3,4]. It is implied that the development of a balanced family is ideally felt need for communities and societies. A balanced family solves social problems to a greater extent [10,11]. Existing misbalance in individual family scenario was brought out by a daily newspaper [3].

The cases were known, but exact ameliorations were not very clear then. The aberrated cases brought out in Table 1 and Table 2 made scientific backing of such results. The topic is dealing highly sensitive issue, as one hardly talks aspect, in good spirit. Unethical talks are limitless, which is beyond scope of this scientific study. For the case study of Japan will be taken up in the following sub sections in the coming part of the manuscript.

**Table 3: One male and Female and having balanced family son and daughter**

S.No	One male one female ameliorated					
	Male	Female	Living Standard	Off spring	Family situation	Theory and its man oeuvres
1	M8	F11	Normal	1Daughter+1 son	Ameliorated	Amelioration possible.
2	M9	F12	Normal	1Daughter+1 son	Ameliorated	Amelioration possible.
3	M10	F13	Normal	1Daughter+1 son possible	Ameliorated	Amelioration

\*Subscripts M and F signify individual male and females involved in the case studies here.

### Innovative Indicators of Health Related Issues With Aberrations In The Gender Theory

Table 1 shows aberrated cases having only female genders. Such aberrations occur in low pH situations ie under prevalence of acidity. The ladies’ suffering due to PCOD and Urinary tract affect situations adversely. This opens a new frontier of curing gynecological concerned disorders. Acidity or low pH confirms the environmental impact of pollution in UTI infections produce only female children [10]. The original genetic theory did not foresee such likely bad phenomena then. About one and quarter Century passing time this is first study to come with scientific solution. The failures in the original gender theory became cause for people losing belief and reverting people follow other routes for obtaining and fulfilling need of desired gender, hence no development could come. The aberration cases in Table 2 show that there are varieties of ailments in fathers as well mothers.

These ailments are the baldness in fathers, severe headache, migraines and in some cases of mental disorders of mothers. Such cases will get suitably corrected by bringing pre pregnancy medical advisory for both partners of couples. This is new knowledge of gynecological concern. Coming to such aberrations of gender theory with reference to country Japan, it is expected that there must be appearing in more no of cases causing deprivation of mother and father care umbrellas. There might have been advancements in medical sciences in Japan curing such ailments, but such community wide social problem is new knowledge, which demands further study, but will not be so easy for very busy society and gentries having shortage of time. Such situations become cause of worry, which trigger acidity and becoming igniter of such bad health issues. As these selected cases happened in reality under the natural conditions, this aberration based study is a new scientific advancement of gynecological concern for the global countries. The situation is true for the universal scenarios and obviously, must be also true for Japan as well. Following subsection will take further elaboration of the situation.

### Community Based Social Issues with Aberrations in The Gender Theory

Japan has established reputation of having aged long life gentry. The aberrations in the family genders are expected to be more in numbers in Japan than those brought out in the present study. The known coming up health issues are eye opener. as it is a universal phenomena. Such aberrations must be happening in Japan. It may come that long time survivor may be single in large numbers, leading to deprivation of mother or father cares umbrella. Existence of such surviving parental cares umbrella is always beneficial for the offsprings. Thus, this study brings a new scientific dimension to such parental cares, which is highly supportive for working parents in office or fields. In African countries ladies keep their kids tied on their back, but for Japan such life style is not appearing in picture (Figure 1).

### Upcoming benefits of balance gender family in life course- a Godly solution

The present study brought prismatic improvement in family gender balance, which makes life course easy and throughout comfortable, pleasant and happy life. As individual members become likeminded people group forming communities, societies, villages, cities, towns, districts, countries and the world. Thus, a seed for building decent gentry has been created and nursed. This will grow with time and will bring a new decent world. This is a wow research in world gentry’s creation by innovative way. The aberrations have been rectified by the new perfection of original xx-xy (female-male) gender theory, which otherwise nearly had left the ground thus, people in helplessness reverted back to their own mentally evolved routes for seeking God’s blessings [9]. Under the aforementioned situation of helplessness this research complements legendary saying that God helps those who help themselves. That is how the present research became a Godly solution with respect to bringing gender balanced families.

### Prior indicators associated with aberrations in gynecology

Present study established the results of aberrations in the scientifically discovered xx- xy (female-male) gender theory, making imperfect. Deep category wise case by case studies enabled identifying bio factors and corresponding initial indications. These indicators served as cause and effect in the human biology (Table 1 and Table 2). The initial indicators are a few in ladies, which could become easily clear and understood in cases, come at surface. In the contrast stone formations in kidneys, pancreas and other glands occur due to enhanced impact of pH (Table 2), baldness, and mental disorders identified as new prior indication linked to gynecology. Suitable medications will rectify the likely defect in births. Studies and included the rectifying measures under the author’s new theme “Food is medicine” [2-7].

### Development of decent community and society in multi culture gentries of Japan

This theory has created new perfect seed for developing gender balanced families. Thus, there is no likely hood of aberrations as reported in Table 1 and Table 2. The alighted senior citizen need to take lead in starting decent community. This xx-xy gender theory is dealing with keeping social legacy for ever [12]. The senior citizen may organize their group meeting at suitable convenient time. Legendry story narration of personalities will inspire young generations to follow such exemplary path right from their early age. Thus, any bad attitude will get overshadowed by the good conducts coming from the social legacies. This, nursery reared idea will get transplanted in young generations’ mind that will enable grow with life course process. The multi-cultured society will realize such new benefit and developing liking for each other benefitting countries having fragmented cultured societies. It is expected that the new innovation in gentry, society and survival of legacy forever will create new socio cultural and technological advancements in countries world over.

### New Bio-Ecosystem Emerging Concept in Gynecology

This study introduced another new concept of bio-ecosystem, which implicates that set back at any stage in course of life brings its adverse as well as good results parallel to that in ecosystem services. Hence, it needs immediate relieving medical cares. Any unresolved medical care brings adverse effect at later time of its production process. Therefore, the aberrations brought out in Table 1 and Table 2 needed overcoming the advances in the life course. The bio eco system support effect of any defect in gentry on gender as well on developing visible ailments on the parents, which grow as senior citizen, highly relevant to Japanese gentry [13].

### Geographical impact on Japanes gentry and its innovative amelioration

Japan is geographically an island group country, occupying over 90 % geographical areas under hills and forest. The studies have established that fruits and nuts are highly desirable and effective in bringing feeling good and wellness for getting quick reliefs from the ailments. Japan has in fruits and vegetable largely citrus, oranges, melons and cherry (Figure 2), which are non genomic. All such fruits and vegetables create health and wellness. Japan has coastal climate modified by altitude, which resemble mixed nature of climate of Kerala, which are ideal for early births and growth of children and the altitude dominant climate of Jammu and Kashmir in North India, having long life of senior citizen. The newly perfected gender theory and beyond will be highly relevant in tackling problems and issues coming up in Japan in particular, and for entire worldly countries, in general. Both innovations viz. prismaticism of gender balancing in one hand and overcoming untimely deaths of the parents remaining with ailments or surviving singly, creating loss of parental care umbrellas on the other, will bring happy Japans life course. The existing hill and forest need to be suitably managed by enforcing innovative policy issues [9-18]. Japan Government should explore possibility of genomic fruits and nuts available for the gentries, which become stress reliever and making feeling good and happy life course (Figure 2).

**Figure 2:** Cherry grows well in Japan, which is good for taste but it does not contain desired genomic enhancing qualities

### Discussion

The study had fixed plenty reasons for causes responsible for low birth rates and increasing aging gentries 65 years or more. Multi nationality cultures have different socio cultural settings and life styles, societal groups. It was also noticed that there occurs lack of genomic fruits and nuts which foster conceptions. Delayed marriage and work pressure spoil pleasure. The industrialized country imposes stressful busy work pressure. There exist variety of social hardships and uncertainties in many respects which cause problem clouds. These plentiful reasons cause acidity in Japanese and remain troubled life course. The gentry do not have pleasurable

life and feeling well.[4]. There is lack of xx-xy female-male gender theory knowledge. Different sociological culture impairs existence such gender theory knowledge. New perfection of theory will eliminate aberrations which will make decent gentry [9-13].

There is no realization of utility of making gentry feel relaxed, hence overworking stress spoils all likely pleasures in life. Further, multi nationality gentry have adopted age of marriage 27 years, which is late and entangled with lot of reproduction related ailments. There is no existence of practice of pre pregnancy medical advisory consultations, hence the birth rates are low and likely chances of aberrations in family genders. Japanese Prime minister had very rightly issued advisory about now and late never for late married society make up their mind for having child.

Japan needs to import genomic fruits and nuts to enable gentry get free of stress and have pleasant living and wellness. This will enhance birth rates. Work from home culture should be providing relieving effect. The forest should be transformed in Forestry-horticulture, which will produce genomic fruits and nuts [4-18]. Knowledge of gender balancing and stability in stay should be looked in to by the Government.

The environmental disorder is reflected by the pH level of urine [5],10]. This study was devoted to look at newly perfected xx-xv (female –male) gender theory. The study reached the conclusion that any initial bad health situation should be overcome right in initial time before any life course reaching to marriages. This precautionary measure will eradicate developing aberrations in the family life course.

### Conclusion

This study dealt with worldly advancement in gender theory in resolving issues concerning gynecology in multi nationality and different cultured gentry of Japan. It also opens new frontier in Japan on managing gentry, society and population sustainability, which has not been in prevalence. The study made many suggestions for restoring birth rates, relaxing gentry to have pleasant lives, getting free from stress. Making availability of fruits and nuts is highly advisable for reducing stresses in the pleasant life styles. It will be effective to bring age of marriage from 27 to 25 years, which have implicating benefit for the country's resources by building new factor of social legacies survive forever. Transformation of large area under hill and forest in to Forestry –Horticulture is highly advisable with strong justification as a policy issue, which will take least time of gentry and reduce stressful life in pleasant life, under changing climate situations.
